EXECUTIVE PROFILE

Visionary Enterprise Solutions Architect, Institutional Trading Platform Founder, and Autonomous AI Systems Pioneer. Creator of the **Organic API Advocate System Architecture (OASA)** — the living, self-negotiating evolution of the OpenAPI (OAS) standard. Unique unfair advantage combining Wall Street institutional execution (Morgan Stanley Vice President, direct-report to CEO John Mack post-Lehman, \$13.6B+ volume) with modern sovereign AI engineering (AMD SEV-SNP confidential hardware enclaves, kernel 0.0.0.0/0 zero-egress netfilter containment, and sub-32ms TypeSafe Jev System One decision primitives). Proven track record scaling platforms from 0 to 200,000+ users across 173 countries with a 750+ provider API ecosystem.

KEY ARCHITECTURAL INNOVATIONS & PATTERNS

- **Organic API Advocate System Architecture (OASA):** Decentralized Sub-Commander Control Nodes (CISO, Operator, Resource, Veracity) that advocate on behalf of subordinate agents and autonomously negotiate state via TypeSafe Jev System One.
- **Sub-32ms TypeSafe Decision Primitives:** Mathematically bounded typed primitives (choice, noun, score) executing in <32ms at \$0.0035/100 calls (129x cheaper than Sonnet) with 100% schema validity and zero training data egress.
- **Confidential Hardware Enclaves:** AMD SEV-SNP encrypted microVMs with kernel-level 0.0.0.0/0 DROP ALL netfilter rules, intercepting OWASP Top 10 exploits in <42ms with immutable SHA-512 ledger hashing.
- **Adaptive Admission Control:** Dual-priority backpressure chokepoint delivering 3,323 / 3,323 HTTP 200 responses with zero 5xx errors under 100% saturation stress.
- **Commercial IP Moat & Domain Arbitrage:** Pre-empted multi-million-dollar brand collisions by acquiring trustable.com (\$25k escrow) and 11-TLD defensive moat, creating +\$1.47M in immediate enterprise equity value.

SIGNATURE PROFESSIONAL EXPERIENCE

Founder & Principal Solutions Architect — EngineWare.ai / CareerCaptain / Trustable

January 2023 – Present | San Francisco Bay Area & Remote

- Invented the **Organic API Advocate System Architecture (OASA)** standard, replacing static REST/GraphQL endpoints with living Sub-Commander Control Nodes that negotiate state organically via TypeSafe Jev System One.
- Architected **TRUSTABLE Enclave (Powered by Lovable):** Designed enterprise trust layer wrapping Lovable prompt-to-app speed in AMD SEV-SNP hardware isolation with 13 production modules including TrustGuard Red-Team Attack Workbench.
- Shipped 5 production platforms (CareerCaptain, Trustable, CoachCompass, MYCDB, MYC Events) on Lovable and dual RTX 4080 GPU infrastructure with zero code regressions.
- Established 'Lovable Canvas + Git Review' bi-modal development protocol with .github/CODEOWNERS locking, letting designers build in Lovable while engineers enforce backend contracts.

Founder, CEO & Trading Platform Architect — Cryptosheets & ParadigmAPI

January 2018 – Present | San Francisco Bay Area

- Scaled market data platform inside Microsoft Excel and Google Sheets to 200,000+ users across 173 countries.
- Engineered unified API ecosystem integrating 750+ data providers, processing millions of daily queries with sub-200ms TTFT.
- Translated complex hedge fund, institutional trading desk, and regulatory requirements into push-button spreadsheet models.

Vice President, Idea Origination & Sales Desktop Technology — Morgan Stanley

June 2009 – January 2013 | New York, NY

- Direct executive-mandated role reporting to Global CEO John Mack post-Lehman to unify fragmented divisions and trading desks.
- Architected the **One-Click Buy Ticket** connecting 16,000 Financial Advisors to institutional trading desks, shaving 90% of execution time and unlocking \$100M+ in organic revenue.
- Directed enterprise integrations with Bloomberg Enterprise, S&P; Global, and Thomson Reuters.

Senior Director, Portfolio Manager & SFC Type 9 Responsible Officer — Parry Capital / Vertical Ascent

May 2015 – May 2018 | San Francisco & Hong Kong

- Traded \$13.6B+ in global fixed income and \$1.1B+ in equities across US, European, and Asian markets. Owned risk, allocation, execution, and 45+ institutional prime counterparty relationships.

EDUCATION & TECHNICAL SKILLS

- **Education:** Harvard University Post-Graduate Studies (Computer Science & Quantitative Economics) | Licenses: Former Series 7, 63, SFC Type 9 RO
- **Architectures & Protocols:** Organic API Advocate System Architecture (OASA), OpenAPI / OAS 3.0, AMD SEV-SNP Enclaves, Kernel Netfilter (0.0.0.0/0 DROP), SSE Streaming, TypeSafe Jev System One, Universal DataProvider Contract.
- **Stack:** TypeScript, React 18/19, TanStack Start/Router, Python 3.12, FastAPI, SQL Server, PostgreSQL, Drizzle ORM, Supabase RLS, Docker, Linux MicroVMs.
